## Work Experience

### Monstarlab, (Prague)

**OCTOBER 2021 – PRESENT**

#### Cloud Infrastructure/DevOps Engineer

Deploying and maintaining scalable, highly available applications on AWS (partially Azure) for several customers and internal projects. Provisioning Infrastructure using (IaC) Terraform and Ansible for configuration management. Work closely with developers to build (CI/CD) pipelines and deploy applications on various environments following the best practices. Building applications using Docker and Kubernetes (Helm). Deploying and maintaining several Linux/Windows servers. Working with Git version control system.

Migration of several applications from one platform/service to another and implementation of monitoring and alerting tools based on client needs.

### Monstarlab, (Prague)

**AUGUST 2020 – SEPTEMBER 2021**

#### Lead System Administrator

In a multi-cloud environment responsible for the design, implementation and administration of Azure, AWS, GCP, JumpCloud. Migration of G Suite (Google Workspace) from more than 15 sites included EMEA/AMER/APAC into one Global Tenant. Several Office 365 migrations to G Suite for new partners. Azure AD design, implementation

and administration, together with the implementation of Active Directory infrastructure globally. Slack, Atlassian Cloud/On-prem migration and administration. Responsible for the design, implementation and administration of Sophos Endpoint Protection, MDM, Office 365, Zendesk globally. Administration on several platforms like Github, Recrutee, IT Glue, Bugsnag, 1Password, Lucidchart, Scrutinizer etc. Responsible for the Single sign-on implementation on multiple applications.

High focus on security following the best practices where is possible and working closely with the security team to achieve the best results required for ISO certifications. Colleagues training on a regular basis from several countries on new or current platforms.

### **NN Group, (Prague)**

**JULY 2017 – JULY 2020**

#### **System Administrator**

In a Scrum environment responsible for the support of multiple AD forests and services (DHCP / DNS / GPOs / WSUS / DFS / WEC / PKI / AD FS / MFA / Azure AD / ATP, ATA / Hyper-V). Worked under the Active Directory administrative tier model and been responsible to maintain and improve it following the best Microsoft practices. Collecting and analysing requirements for new deployments and executing changes on the production AD infrastructure. Supported development and maintenance of AD designs, guidelines and documentation procedures as well as ensure compliance with NN policies and standards.

Worked with the security teams to maintain and monitor AD setup, provide reports and suggest or implement changes for the security improvement in AD.

### **IBM Client Innovation Centre Central Europe, (Brno)**

**MARCH 2016 –JUNE 2017**

#### **System Administrator**

Responsible for monitoring, controlling and troubleshooting servers, networks, applications and distributed systems in a multi-vendor environment. Administration of MS Windows server based operating systems such as Windows Server 2000, 2003, 2008, 2012, connected services DNS, DHCP, Active Directory, infrastructure VMware and Middleware IIS, MS SQL.

Implemented routine and preventive maintenance tasks like application loads, disk utilization, system loading and system monitoring. Performed required Change Control processes to ensure proper approval and execution of tasks. Coordinated with IT personnel, stakeholders and vendors to identify customer needs of new project requests.

### **CPI, (Athens)**
